Mission Statement

A recent graduate from the University of Auckland who finished a Masters of Information Technology and an undergraduate degree in Psychology from the University of Adelaide. I am experienced in log analysis, backend, frontend development and pride myself on stakeholder negotiation.

Experience

Air New Zealand · DevOps Intern - Systems Analyst 2025-2026
Completed a 12-week internship as a Systems Analyst within the DevOps division. Established API observability from the ground up by designing and implementing Splunk dashboards for internal ticketing and reservation services where no prior monitoring capability existed. Developed log queries and alerting logic to surface high-signal indicators such as sustained error rates and latency anomalies, enabling proactive issue detection. Contributed to improved operational transparency, enhanced documentation practices, and collaborated within a cross-functional agile team, presenting progress during stand-ups and sprint reviews.

Inland Revenue · Customer Enquiries Assistant 2024-2025
Responded to customer enquiries via secure online messaging regarding tax obligations, entitlements, and account management. Maintained and updated customer records to ensure data accuracy and compliance with internal policies. Conducted outbound calls to resolve complex or sensitive cases, applying analytical judgement and clear communication to achieve timely resolution. Consistently met and exceeded performance KPIs, including response time and customer satisfaction targets.

Education

2024-2026	Master of Information Technology University of Auckland
2023-2024	Postgraduate Certificate in Information Technology University of Auckland
2018-2022	Bachelor of Arts in Psychology University of Adelaide

Projects

Itinerarium	Collaborative MERN stack web application that allows users to pin, organise, and share travel experiences on an interactive map. Implements real-time updates using WebSockets, secure authentication, and a modular full-stack architecture designed for scalability and responsive user interaction.
Home Lab	Self-hosted ARM-based home lab running services such as Firefly III (personal finance management) and AdGuard for DNS-level filtering. Containerised services using Podman and implemented Glance as a unified dashboard interface. Applied

DevOps principles including infrastructure configuration, service monitoring, and container lifecycle management.

Skills

Programming Languages Java, Python, JavaScript, SQL

Frameworks & Libraries React, Node.js, Express, MongoDB

Cloud & DevOps AWS, Splunk, Docker, Grafana, Linux
